

Introduction

ZeroCoin ZRC ∞ is a decentralized cryptocurrency built on Polygon blockchain

ZRC designed to prove that a successful crypto project can emerge without a hefty budget. Developed with a zero-budget approach—without costly marketing, pre-mining advantages, or investor fundraising—this project is not entirely community-driven and focused on fairness, sustainability, and long-term real-world applicability. In addition to its core functionalities, **ZRC** will feature bridging capabilities with **BNB**, empowering users to transfer tokens seamlessly across networks.

Owner-details: <https://zerocoin.netlify.app#owner>

Key Specifications

Blockchain: Available on Polygon (MATIC) and bridgeable BNB Smart Chain

Transfer Tokens seamlessly across Networks 2025-Q3

Token Name: ZeroCoin

Symbol: ZRC

Decimals: 8

Total Supply: 4.702 million ZRC

Creation Date: February 26, 2025

Smart Contract Address: [0x1ec961190cadf1ae6c9488580cb9b8d09ff75c79](#)

Development Philosophy

ZeroCoin ZRC is built on simplicity and transparency to guarantee fairness and accessibility for all participants. The project upholds several core principles

Long term release plan (+9 years)

No Pre-Mining or Hidden Allocations: The entire token supply is distributed fairly from inception

No Airdrops or Artificial Giveaways: Every token represents actual, circulating value

Structured Token Release Schedule: A controlled release prevents inflation while ensuring market stability

Low-Cost, High-Efficiency Transactions: Leveraging Polygon ensures minimal fees and high-speed transfers

Additionally, recognizing the evolving needs of decentralized finance, the project has implemented bridging functionality. This allows ZRC holders to transfer their tokens to the BNB ecosystem without the need for intermediaries, increasing utility and liquidity while promoting cross-chain interoperability. This bridging feature has been developed in line with industry best practices and reputable models of cross-chain bridges (see <https://www.binance.org/en/bridge> for a comparable framework).

The Purpose of ZeroCoin ZRC

The project was created to demonstrate that a cryptocurrency can thrive without extensive funding or aggressive marketing. ZeroCoin is designed to provide real-world value through a community-focused approach, offering

Practical Utility: With its limited supply and controlled release, ZeroCoin is positioned for sustainable growth and everyday use

Interoperability: The newly integrated bridging function with BNB enhances user flexibility across blockchain networks without compromising security or decentralization

A Vision Beyond Finance

The vision of **ZeroCoin** is to serve as both a meme and a meaningful project, combining humor with a deeper mission. While it embraces the fun and viral nature of meme coins, **ZRC** also aspires to make a difference in the world by supporting charitable causes and ethical initiatives

High-Impact Goals

ZeroCoin commits to giving back to society and setting a high ethical standard for crypto projects. A portion of the project's profits will be dedicated to

Supporting Gaza and orphans – 6% of all profits will be allocated to charities that provide food, shelter, and education for those in need

Sustainable growth – A controlled token release schedule ensures long-term stability, preventing inflation and reckless distribution

ZRC is not just another token—it's an experiment in fairness transparency and meaningful impact

Tokenomics & Distribution plan

Token Supply and Structure

ZeroCoin was created with a fixed total supply of **4.7 million ZRC**, ensuring scarcity and long-term value. The **8 decimal** precision allows for microtransactions while maintaining the coin's integrity

Total Supply: 4,702,000 ZRC

Decimals: 8

Token Release Schedule

To ensure fairness and prevent price manipulation, **ZRC** follows a structured release schedule that balances availability and long-term sustainability

Phase 1: Initial Release 60%

Timeframe: First 12 to 18 months

Percentage Released: 60% 2,821,000 **ZRC**

Purpose: Establish circulation and liquidity

Phase 2: Controlled Yearly Release 4% per year

Timeframe: After the first 1-1.5 years

Annual Release: 4% of total supply 188,080 **ZRC**

Distribution: Released gradually throughout the year to avoid sudden market impact

Note: The team will use no more than 2.5% ZRC for collaborations, promotions, or any added value initiatives.

ZeroCoin was launched without pre-mining, meaning no coins were reserved for founders or developers before public availability. This ensures a fair and decentralized distribution process

Transaction Fees & Sustainability

No inflation: Fixed supply prevents devaluation over time

of profit 6% allocated to charity: Supporting Gaza and orphan relief programs

Polygon-based: Transactions are fast and cost-efficient

Bridging and Interoperability

ZeroCoin now features an advanced bridging module at Q3 2025, that enables token transfer between the **Polygon** and **BNB** networks. This capacity:

Enhances Liquidity: Users can leverage both ecosystems for trading and liquidity provision.

Expands Utility: Provides additional avenues for integrating ZRC into various decentralized finance (DeFi) applications across chains.

Ensures Security and Transparency: The bridging process follows stringent protocols consistent with industry best practices, similar to recognized models from Binance Bridge.

Technical Specifications

ZeroCoin is built on the **Polygon (MATIC) blockchain**, taking advantage of its **low transaction fees, high speed, and security**

Blockchain: Available on Polygon (MATIC) and bridgeable to BNB Smart Chain

Transfer Tokens seamlessly across Networks 2025-Q3

Consensus Mechanism: Proof of Stake PoS

The **ZRC** smart contract was developed with security in mind, ensuring **no central authority can modify, freeze, or increase the supply** once deployed

No Admin Control: No individual can freeze accounts or manipulate the system

Auditable on Polygonscan: The contract is publicly viewable for full transparency

Low Gas Fees: Users benefit from Polygon's efficient network

Roadmap

ZeroCoin ZRC is committed to long-term growth, development, and community-driven success. Below is a structured roadmap outlining key milestones and future initiatives

Phase 1: Foundation & Launch 30% Q1-Q2 2025

Token Deployment on Polygon –

Whitepaper Release – Providing transparency and details about the project

Community Building – Establishing a presence on social media and forums

Website Development – Launching an official website with project details

Phase 2: Growth , Adoption & Lunch 30% Q3-Q4 2025

-Transfer Tokens seamlessly across Networks

Exchange Listings – Apply for ZeroCoin to be listed on decentralized exchanges (DEXs)

Marketing & Awareness – Organic promotion to attract users and supporters

Strategic Partnerships – Collaborating with projects that align with ZRC's vision

Community Governance – Explore ways to let holders have a voice in decision-making

Phase 3: Real-World Utility & Expansion 2026 and beyond

-Controlled Yearly Release 4% per year

Charity Integrations – Implementing the **6%** profit donation plan for **Gaza** and **orphans**

Ecosystem Development – Exploring potential real-world applications for **ZRC**

Major Exchange Listings – Expanding to centralized exchanges (**CEXs**)

Mass Adoption Efforts – Growing the community and expanding global use cases

How the Community Can Get Involved

Anyone can contribute to the success of **ZeroCoin** by

Spreading Awareness: Sharing information and helping the project grow

Providing Feedback: Suggesting improvements and ideas for development

Supporting Charity Initiatives: Engaging in donation and charity efforts

-Twitter: [@ZeroCoinzrc](https://twitter.com/ZeroCoinzrc)

-Telegram group: <https://t.me/ZRCzerocoin>

Transactions on Polygon are extremely cost-effective, making **ZeroCoin** suitable for **daily use, microtransactions, and community-driven economies**

Average Transaction Fee: Less than \$0.01

Transaction Speed: Near-instant confirmation approx. 2 seconds

Scalability: Capable of handling thousands of transactions per second

By utilizing **Polygon ZeroCoin** ensures **low costs and high-speed transfers**, making it practical for everyday use

Legal Disclaimer

Not Financial or Investment Advice

ZeroCoin ZRC is a **decentralized cryptocurrency project with no central authority**. This document is for **informational purposes only** and does not constitute financial, investment, or legal advice

No Guarantees of Value

ZeroCoin ZRC has **no inherent monetary value** and is subject to **market fluctuations**. Users should conduct their own research and **exercise caution when engaging with any cryptocurrency**

Regulatory Compliance

Cryptocurrency regulations vary by country. **Users are responsible for ensuring their compliance with local laws** before acquiring, holding, or transacting with **ZeroCoin ZRC**

No Liabilities

The **ZeroCoin ZRC** ∞ team, developers, and community members **are not responsible for any losses, damages, or financial impacts** resulting from the use of **ZRC**. Users engage at their own risk
